Abu Saeed Trading Company LLC has commendable infrastructure and maintains a large inventory of a complete range of specialized tools, parts & equipment's for the industry to meet the demands of new projects and main tenance services.

What is refrigerant?

Refrigerant is the substance contained in the coils of the air conditioning unit which transfer heat from one area, and remove it to another. Usually a gas at room temperature. Refrigerant is inevitable to an air conditioner to keep your home cool.

What is the Role of Refrigerant?

Air conditioners contain refrigerant inside copper coils. As refrigerant absorbs heat from indoor air, it transitions from a low-pressure gas to a high-pressure liquid.

It is a low-pressure gas that is basically stored in the copper coils. As refrigerant absorbs heat from indoor air, it transitions from a low-pressure gas to a high-pressure liquid.

Later, The refrigerant cools down and turns back into a low-pressure gas through a fan until it is again transformed into a gaseous form.

This refrigerant cycle keeps on going until the temperature desired inside your home is achieved by moving the cold air inside and pushing the hot air outside via refrigerant piping

What we do?

Abu Saeed Trading Company LLC has been dedicated to make the world better through diverse business and advanced technology in the fields of Air Conditioning and Refrigeration along with all supporting Electrical parts and Equipments. We are the distributors of a wide range of components, equipments, spares and tools for the industry. We deal in only the best brands from world's well known companies who manufacture state-of-the-art products.
